

What is GRC

GRC (GLASSFIBRE REINFORCED CEMENT) is the name given to a wide ranging family of inorganic material of matrix hydraulic cement and fine sand, reinforced with a specially developed alkali resistant glassfibre. The GRC material look as precast concrete in general. However, it could be made in this cross section since it does not consists of coarse aggregate and does not reinforced with steel rebar.

Curently our Glassfibre Reinforced Concrete (GRC) has been used in these applications:

- Architectural panel cladding
- Roofing and walls
- Windows and doors

- Moulding
- Bridge
- Garden Decoration

- Base Transmission Station (BTS) camouflage covers
